2. Request For Qualifications

Introduction

The City of Weslaco Public Utilities Department invites Civil Engineers, Multi-Disciplinary Firms, and any other qualified professionals to submit qualification proposals to provide professional services for Water Storage Tank Engineering Inspection and Evaluation within Weslaco, Texas.

Background

The City of Weslaco water distribution system includes four (4) elevated storage tanks of which two (2) will be considered for rehabilitation. Tank information is summarized below.

Elevated Tank	Address	Year Constructed	Type	Capacity MG	Overflow Elevation	Operational Depth
Bridge	8 th and Bridge	1980	Multicolumn	5.0	130 ft	31 ft
Kansas	2 nd and Kansas	1957	Multicolumn	3.0	130 ft	30 ft

Objectives

The City intends to hire a consulting firm to inspect and evaluate each water storage tank in the system and provide a detailed condition report and prioritized Water Storage Tank Rehabilitation Plan.

At a minimum, the tank inspections will include the following.

- ☐ Sanitary Conditions – those that could allow contamination of the water in storage;
- ☐ Structural Conditions – those that can affect the structural integrity;
- ☐ Coating System Conditions – those affecting the interior and exterior paint;
- ☐ Safety Conditions – those that protect people accessing the tank;
- ☐ Security Conditions – those that prevent unauthorized access;
- ☐ Operational Conditions – those related to operations such as site drainage, electrical components, mechanical and instrumentation equipment;

- ☐ General Details – information on the tank such as overflow height, tank dimensions, overflow pipe size, etc.

All engineering and inspection shall conform to the requirements of AWWA; NACE International; American National Standards Institute (ANSI); American Society for Testing and Materials (ASTM); American Concrete Institution (ACI); State Health Codes; and the Occupation Safety and Health Administration (OSHA) Standards. The inspectors assigned to the work in the field are required to be NACE Certified Coating Inspectors or a NACE Intermediate Coating Inspector working under the direct supervision of a NACE Certified Coating Inspector and AWS Associate Welding Inspector working under the direction of a Registered Structural Engineer. It is anticipated that each tank will be drained for inspection between December and March and that the final report will be prepared and certified by a professional engineer and a NACE III Inspector. If all tanks cannot be drained and inspected in this window, the City will provide a prioritized list of tanks to inspect first.
